

Image 1: PosterJet® 7 user interface showing the main queue and the “Printer Information” tab. The tabs in the lower section of the user interface allow fast access to the main PosterJet functionality. In this case, all the relevant printer feedback is displayed in the lower part of the PosterJet® 7 user interface

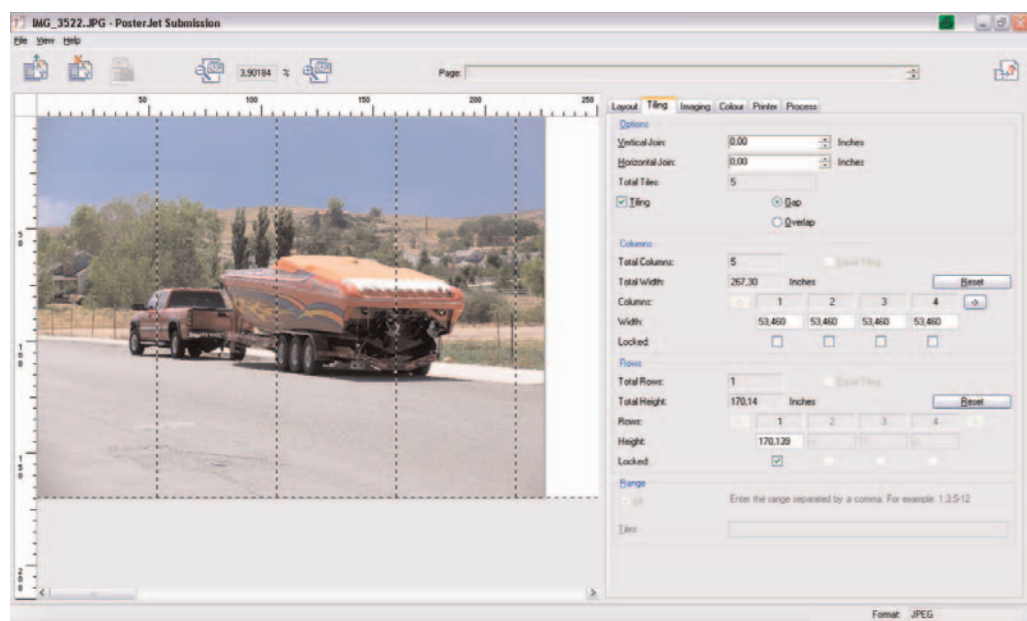

Image 3: Scale images to any size and have PosterJet® 7 calculate the automatic tiling for you. If required, just use the mouse to adjust the width of any tile or introduce a new tile (horizontal or vertical). If you already know the size of each tile then enter the values in the “Columns” or “Row” section and see the changes happening live in your print preview. To be sure you are not cutting the image through an important place just zoom the preview to any distance required. Get as close as even 1 pixel!

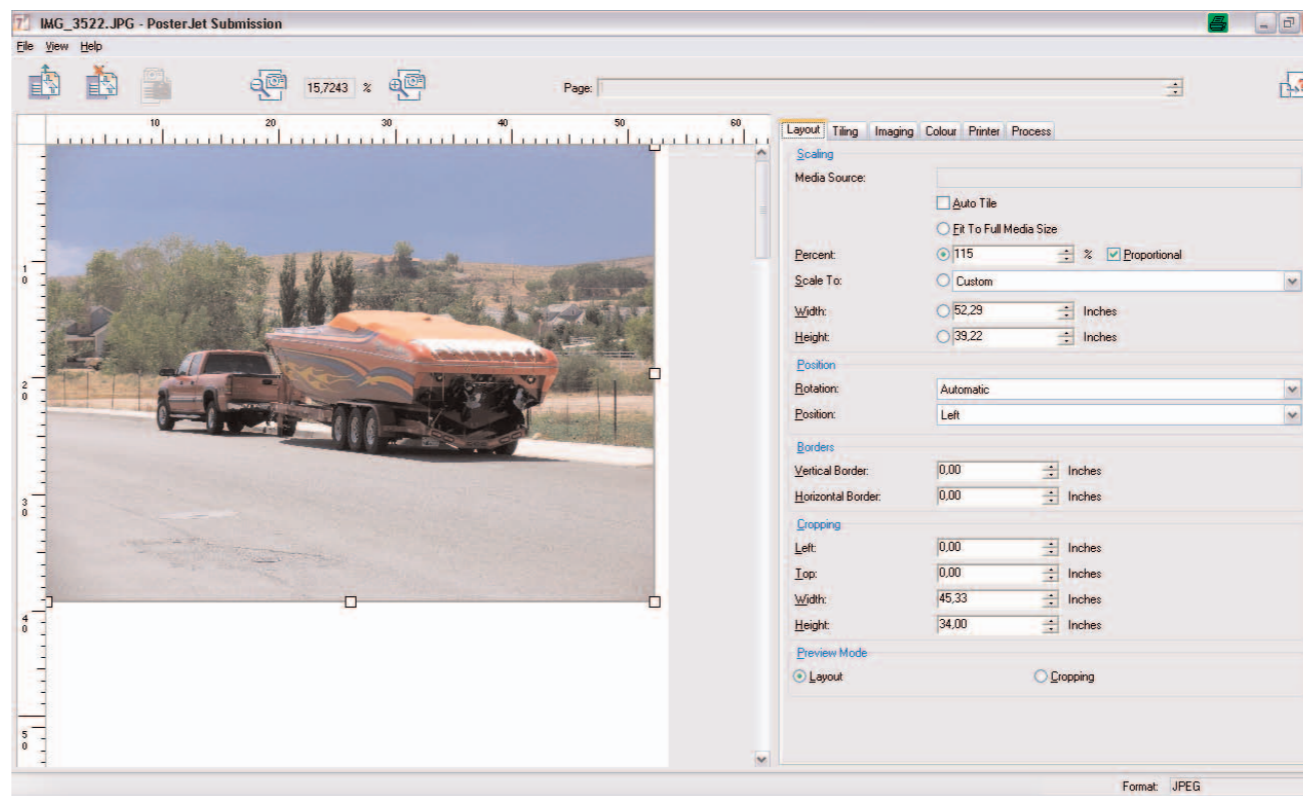

Image 2: PosterJet® 7 submission window showing the the WYSIWYG preview of a print job. All relevant functionality for the submission of a job can be quickly accessed from the submission window. No need to change or switch to other windows. Cropping, scaling, tiling, color settings.... and many more settings and features can be set with only a few mouse clicks. The PosterJet® 7 logic system will ensure that you only enter valid settings (e.g. print borders, image size etc.) at any time to reduce possible user errors to an absolute minimum.
